

Custom Collection Devices

When it comes to sample collection, our emphasis on customization stretches beyond simply supplying the collection devices. We work in close collaboration with you, strategizing and troubleshooting as one to determine the best solutions for your unique needs and flexing to meet any size, volume, format, or preservation compound specifications. After working together on your collection device plan, we manufacture to meet it – whether that's one tube or tens of thousands – coordinate special packaging, global shipping, personalized follow-up instructions, and other services that ensure our devices help you get the most from your research.

Custom Collection Device Uses

- › PK (pharmacokinetic) studies
- › Drug efficacy studies
- › Clinical use development (medical device)
- › In vitro diagnostic (IVD) kits and applications

Clinical Sample Preservation Tubes

Protect the integrity of your samples with devices customized to your preservation requirements. Our 35 years of hands-on expertise helps guide the right formulation for your unique research, ensuring the best options for managing coagulation and preserving analytes.

Protease Stabilizer Blood Collection Tubes

Prevent analyte degradation with sample collection tubes designed specifically for tests where results could be influenced by persistent protease activity. Our carefully formulated anti-coagulant and proteinase inhibitor cocktails preserve sample integrity.

Measurement uses include:

- › Fibrinopeptide-A (FPA)
- › Prothrombin fragment 1+2 (F1+2)
- › Fibrinogen degradation products (FDP)
- › Thrombin/antithrombin III complex (TAT)

OEM Contract Manufacturing & Packaging

Need an ongoing supply of collection devices for your project? Prolytix provides manufacturing and packaging on your timeline. And when it's time to scale-up, our advanced capabilities and informed flexibility help us provide effective solutions that meet your expanding goals.

Why Prolytix?

- › 35 years of experience
- › Solutions created for 100+ biotech and large pharma companies
- › Nearly unlimited reagent selection
- › Custom draw volumes
- › Custom batch sizes
- › No large quantity or cost requirements
- › Analyte preservation expertise

CTC Tubes

Order tubes for the collection and storage of whole blood for circulating tumor cell analysis, including devices for liquid, lyophilized, special draw volume, and more.
